SUMMARY

DevOps-focused engineering student with hands-on experience designing and deploying cloud-native infrastructure on **AWS**. Proficient in containerization, Kubernetes orchestration, infrastructure-as-code with **Terraform**, and building fully automated **CI/CD** pipelines. Passionate about infrastructure reliability, observability, and applying DevOps best practices through real-world projects.

EXPERIENCE

DevOps Engineer

2024 – Present

Freelancing

Remote

- Designed and deployed cloud-native infrastructure on **AWS** across multiple projects covering EKS, VPC, IAM, EBS/EFS, and ALB.
- Built fully automated **CI/CD pipelines** using **GitHub Actions** and **Jenkins**, integrating Docker, ECR, and Kubernetes.
- Provisioned and managed infrastructure using **Terraform**, and set up monitoring stacks with **Prometheus** and **Grafana**.

PROJECTS

CI/CD Pipeline — Node.js on AWS EKS | *GitHub Actions, ECR, EKS, Docker, Kubernetes*

- Automated full pipeline (test → Docker build → ECR push → EKS deploy) via **GitHub Actions** with **OIDC** keyless AWS auth — no long-lived credentials.
- Implemented dynamic image tagging for zero-downtime **rolling updates**; app exposed via **Kubernetes LoadBalancer**.

WordPress Stack on AWS EKS | *EKS, EBS, EFS, Docker, Kubernetes*

- Deployed **WordPress + MySQL** on EKS with **EBS**-backed database persistence and **EFS** shared uploads storage across multiple pods.
- Authored modular **Kubernetes manifests** covering Deployments, PV/PVC, Services, and LoadBalancer — clean separation of concerns.

Stateful Python App on Multi-Node Kubernetes | *Docker, Kubernetes, AWS EFS, NGINX Ingress*

- Deployed 3-replica Python app (registration, auth, To-Do) on Kubernetes with **NGINX Ingress** and **AWS EFS** (CSI Driver, RWX) for cross-pod persistent storage.
- Validated data consistency across pod rescheduling via **PV/PVC** abstractions — zero data loss on restarts.

EDUCATION

Mansoura University

October 2022 – Expected June 2027

BEng. in Computer and Communications Engineering

Mansoura, Egypt

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, EKS, ECR, IAM, VPC, Subnets, Security Groups, CloudWatch, EBS, EFS, ALB, WAF), Terraform.

Containers & Orchestration: Docker, Docker Compose, Kubernetes (Deployments, Services, Ingress, PV/PVC, EFS/EBS CSI).

CI/CD & Automation: GitHub Actions (OIDC, matrix builds), Jenkins.

Monitoring & Observability: Prometheus, Grafana.

Developer Tools: Linux, Bash, Git, GitHub.
