SUMMARY

Computer and Communications Engineering student with solid Linux administration skills and hands-on AWS experience across EC2, VPC, IAM, and CloudWatch. Experienced supporting CI/CD pipelines, containerized workloads, and infrastructure provisioning using Terraform, with a strong troubleshooting mindset and genuine interest in building reliable cloud environments.

HANDS-ON EXPERIENCE

Cloud & DevOps Projects

2024 – Present

Self-Directed Learning and Practical Implementation

Remote

- Administered Linux environments including service management, user permissions, and network-level troubleshooting across project deployments.
- Provisioned and maintained AWS infrastructure using EC2, VPC, IAM, EBS, EFS, and CloudWatch; documented configurations and operational runbooks.
- Built and maintained CI/CD pipelines using GitHub Actions to automate build, test, containerization, and deployment workflows.
- Configured Prometheus and Grafana monitoring with alerting to track system health and respond to infrastructure incidents proactively.

PROJECTS

WordPress Platform on AWS EKS | *EC2, EKS, EBS, EFS, Docker, Kubernetes, Terraform*

- Deployed a production-style WordPress and MySQL platform on AWS with persistent storage using EBS for the database and EFS for shared application uploads.
- Troubleshot environment-level issues including storage mount failures, networking misconfigurations, and application connectivity problems on Linux nodes.

CI/CD Pipeline for Node.js Application on AWS EKS | *GitHub Actions, Docker, ECR, EKS, Kubernetes*

- Built an end-to-end pipeline automating build, test, containerization, and deployment to Amazon EKS with OIDC-based keyless AWS authentication.
- Implemented automated image versioning and rolling update deployments to maintain zero-downtime releases across environments.

Stateful Python Application on Multi-Node Kubernetes Cluster | *Docker, Kubernetes, AWS EFS, NGINX Ingress*

- Containerized and deployed a Python web application with NGINX Ingress routing and EFS shared persistent storage across a multi-node cluster.
- Validated workload resilience by simulating pod failures and verifying data consistency under rescheduling scenarios.

EDUCATION

Mansoura University

October 2022 – Expected June 2027

BEng. in Computer and Communications Engineering

Mansoura, Egypt

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02) — *In Progress*

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, EKS, ECR, IAM, VPC, Subnets, Security Groups, RDS, CloudWatch, EBS, EFS, ALB, WAF), Terraform.

Linux Administration: Service management, user/permission configuration, process monitoring, network troubleshooting, shell scripting.

Containers & Orchestration: Docker, Docker Compose, Kubernetes (Deployments, Services, Ingress, PV/PVC, EFS/EBS CSI).

CI/CD & Automation: GitHub Actions, Jenkins.

Monitoring & Observability: Prometheus, Grafana, CloudWatch Alarms.

Scripting: Bash, Python (basic).

Networking: TCP/IP, DNS, HTTP/HTTPS, Load Balancing, VPC Networking, Security Groups.

Version Control: Git, GitHub.
